

□ NSF Certification

NSF (National Science Foundation) is the most accredited independent third-party certification body which, since 1944, tests and certifies products to meet precise international public health and safety standards.

NSF certification:

- ensures that products have been tested and found to meet the required health and safety standards;
- confirms that labelling and claims are truthful and compliant with regulations;
- demonstrates the company's commitment to quality, safety, and compliance with regulations.

Most importantly, NSF certification is not a one-time event but involves regular on-site inspections of manufacturing facilities and random re-testing of products. NSF certification, therefore, guarantees that not only the products but also the company's entire production process meets high standards of safety and reliability.

□ Indoor Unit Cleaners

Errecom's **evaporator cleaners** are alkaline cleaners developed to **remove** the most stubborn deposits of **organic residues, grease, oil, dust, pollen, and smog** from indoor units. They quickly and effectively degrease the treated surfaces and are particularly indicated for removing dirt settled on coils. They can be diluted with water according to the dilution ratio specified on the product: the higher this ratio, the higher the concentration of active substances contained in the cleaner.

Chinook A/C Filter Cleaner

- Easily removes dust, germs, mould, contaminants, and harmful agents.
- Eliminates the causes of bad odours, leaving a pleasant and long-lasting scent.
- Quick and effective application.
- Ready to use.
- HACCP compliant.
